Basics of HTML/CSS:
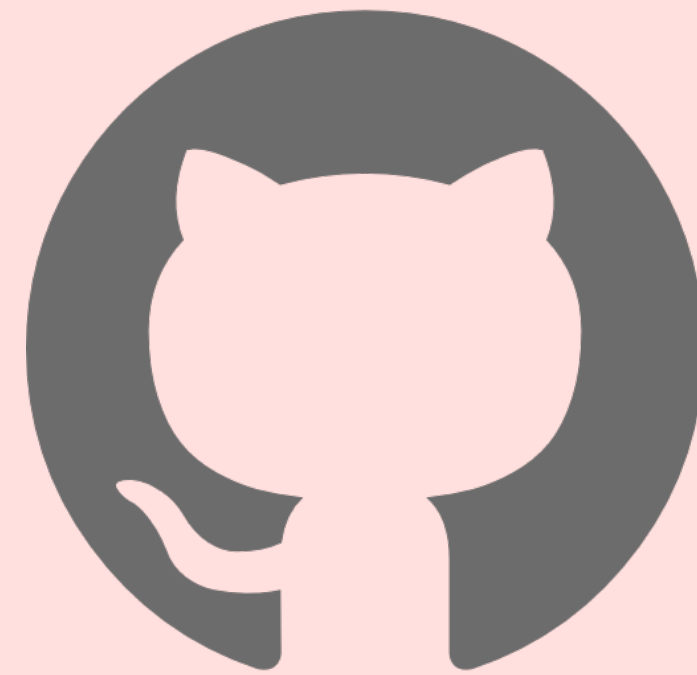

Building your own resume site

For this tutorial we'll be using the files in this **git repo**:
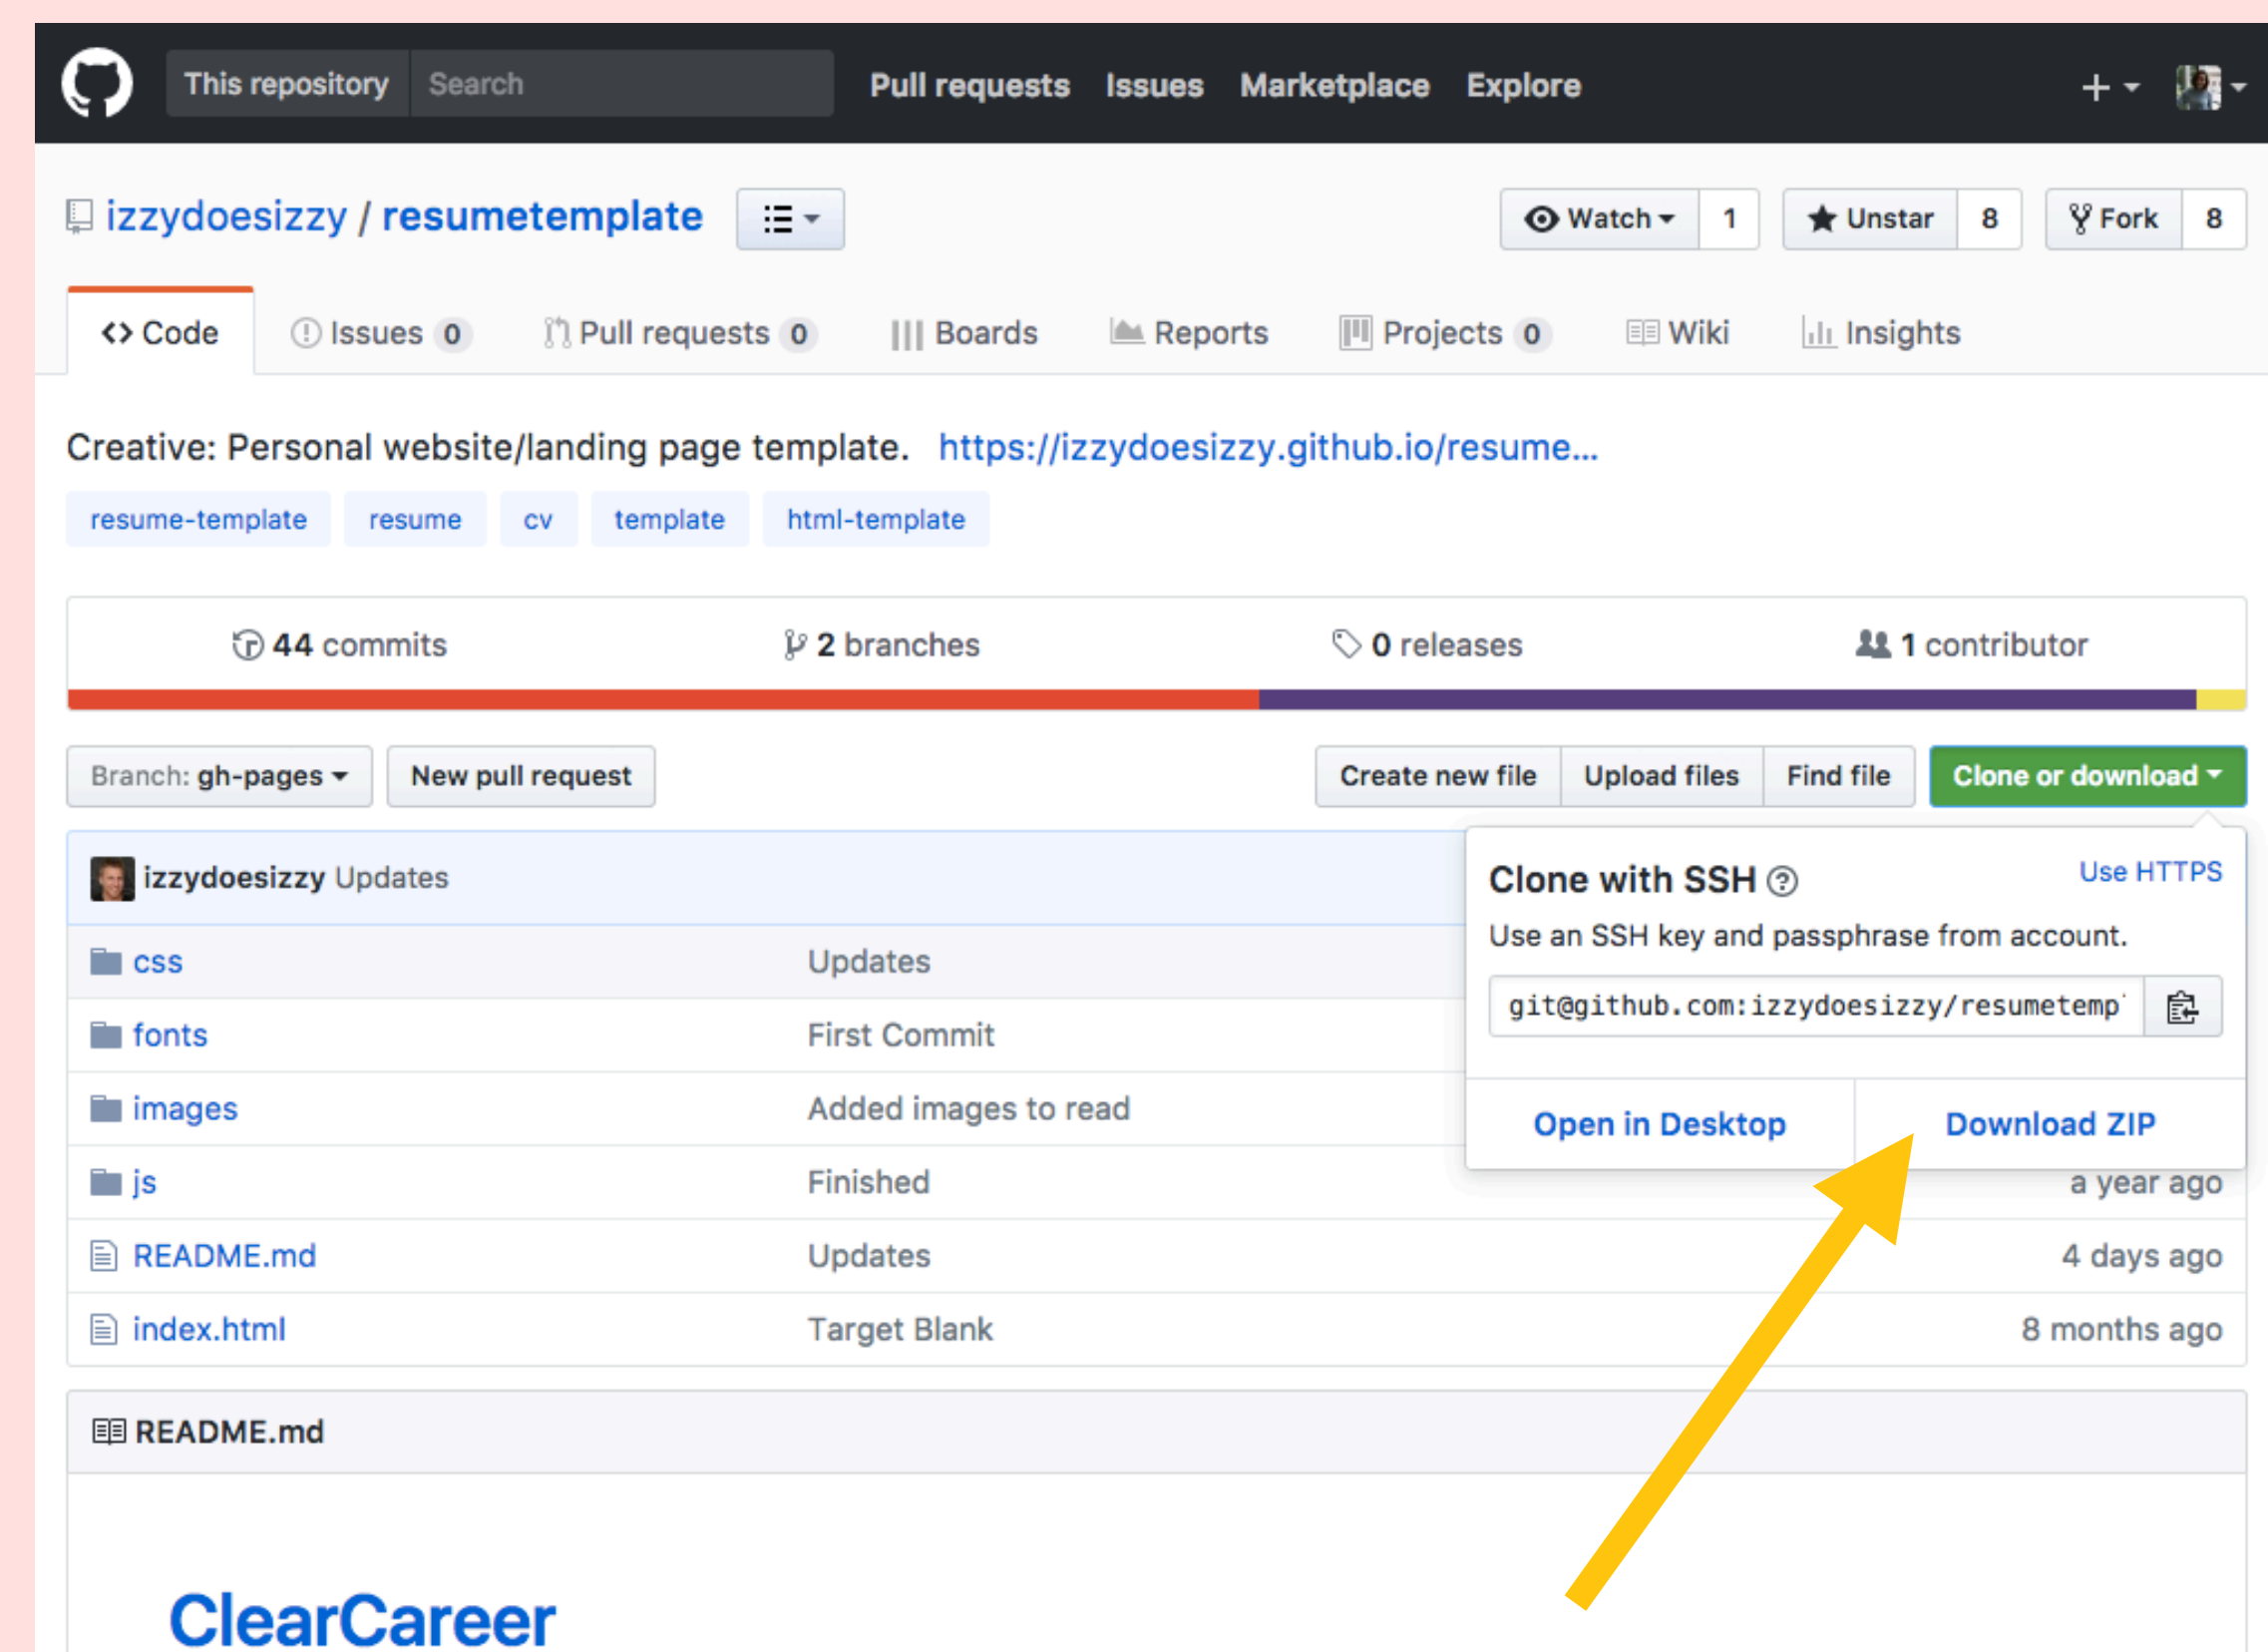

https://github.com/izzydoesizzy/resumetemplate

*If you're familiar with git, feel free to fork the repo and update your own GitHub.io page. If you're not **don't worry about it!**
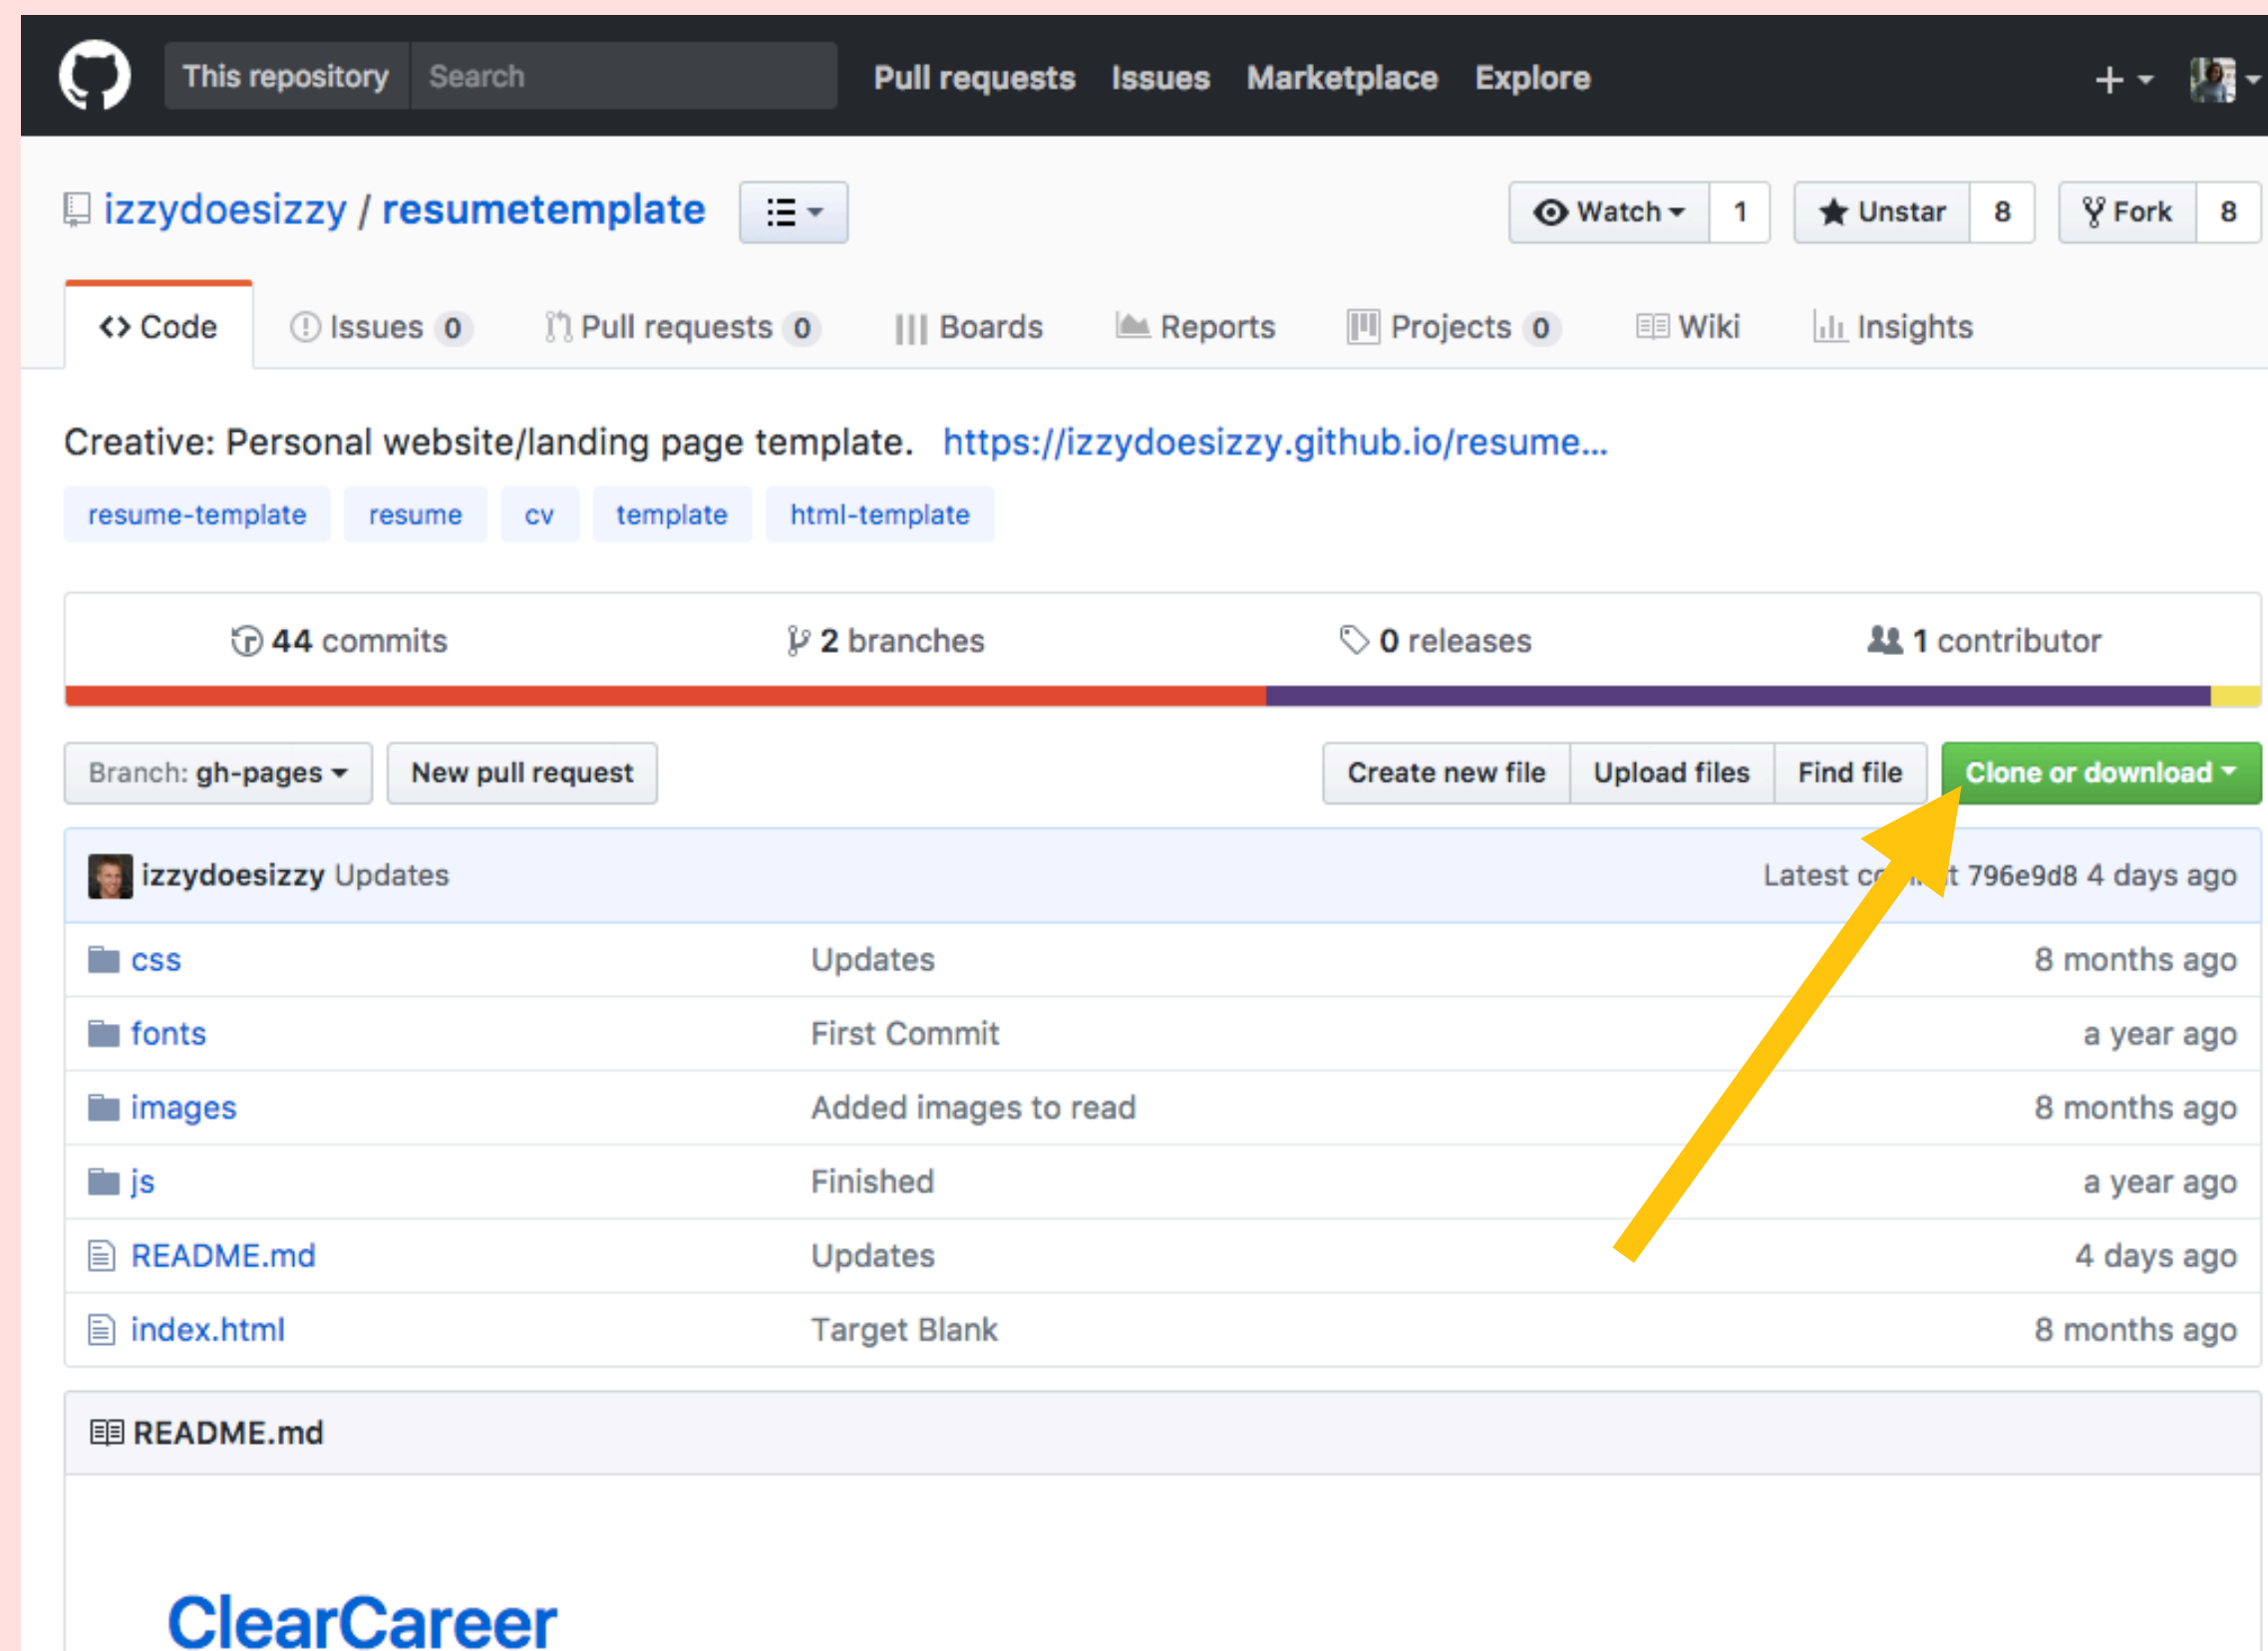

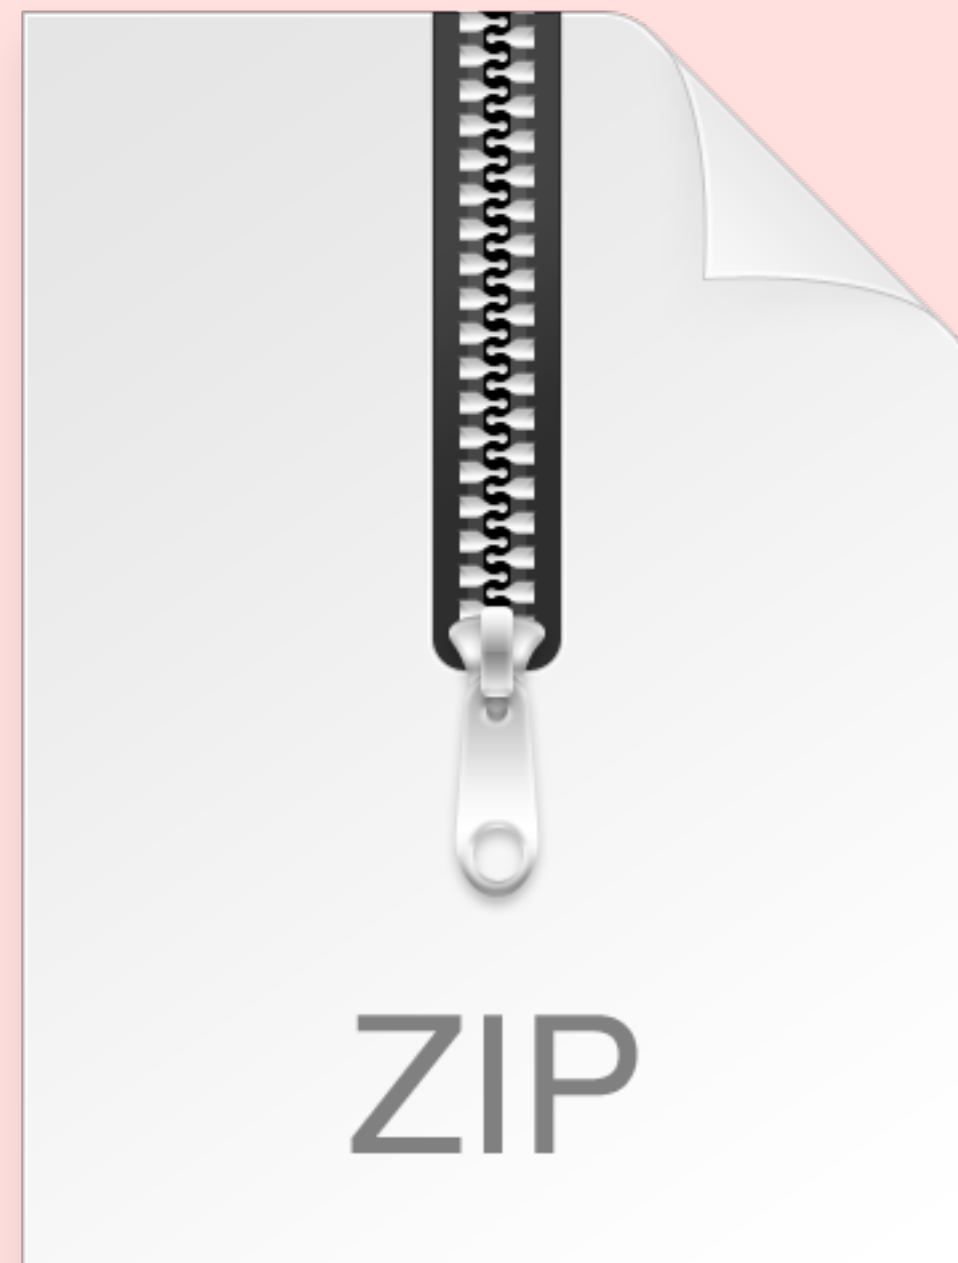

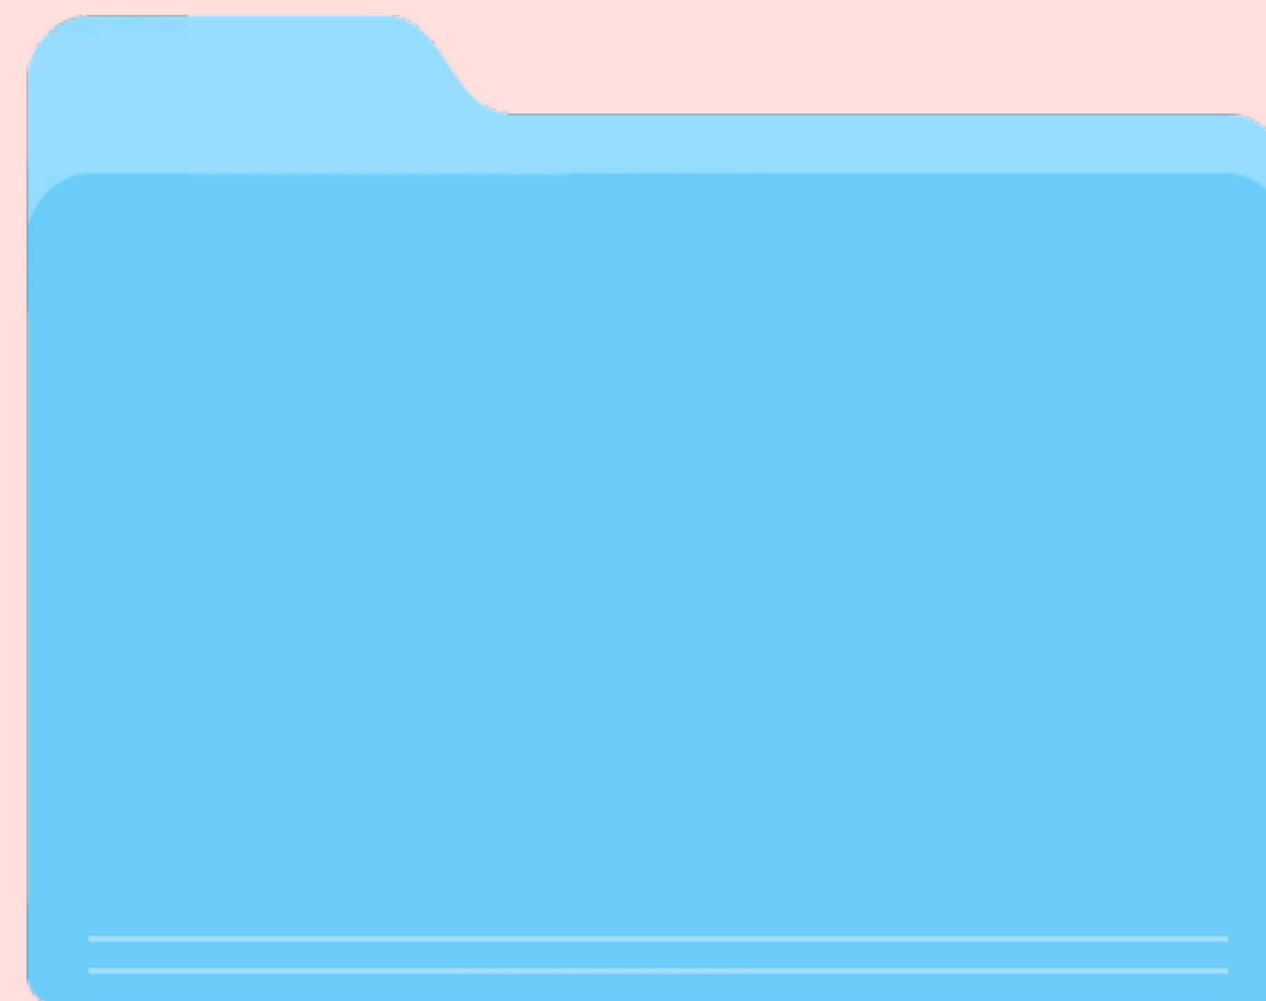

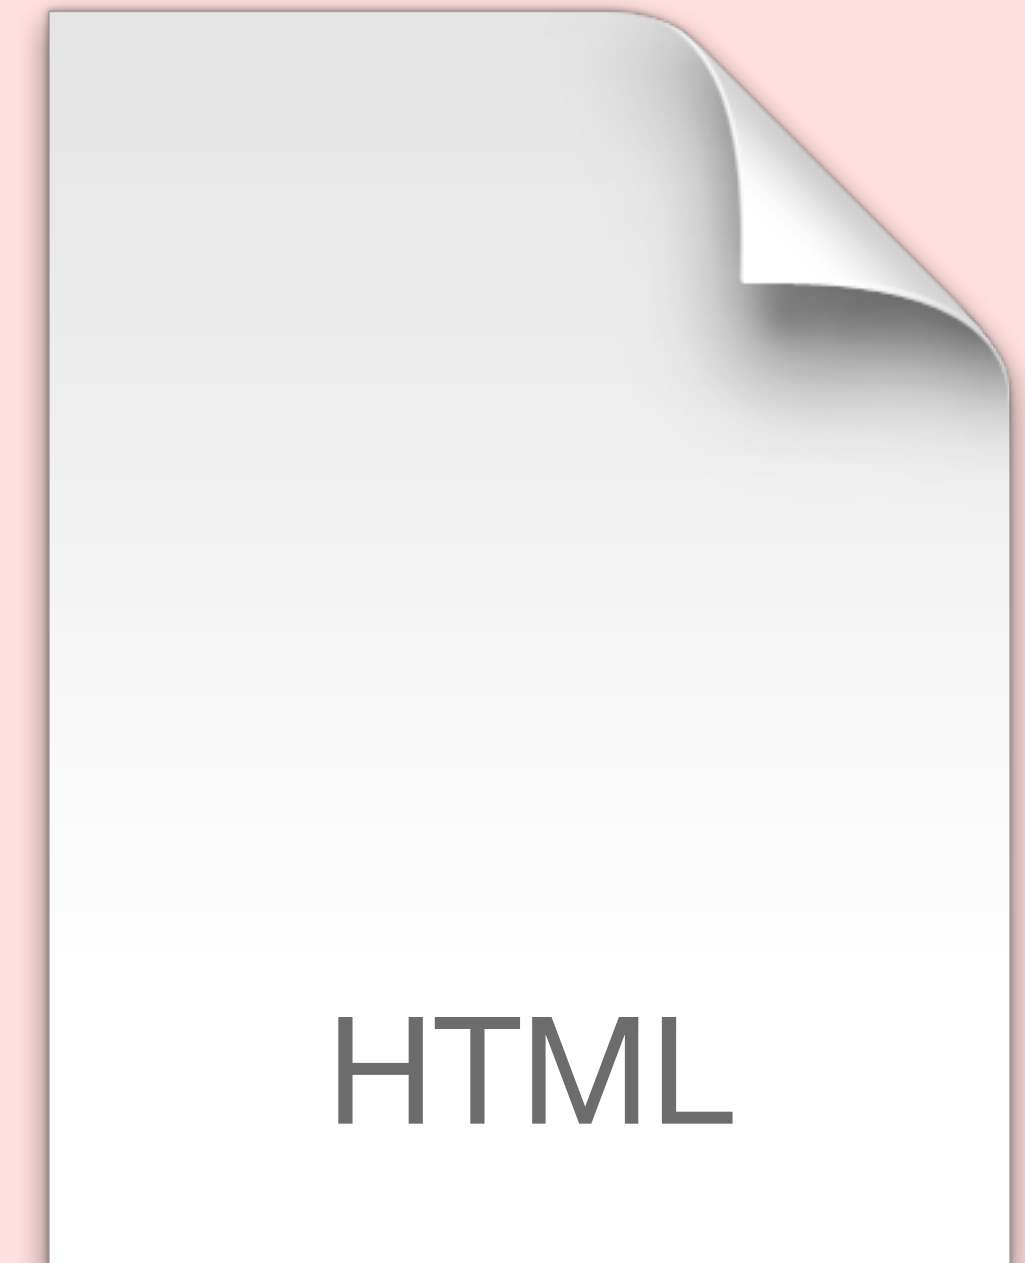

Click: "Clone or Download"

Click: "Download ZIP"

index.html

ZIP

resumetemplate-gh-pages.zip
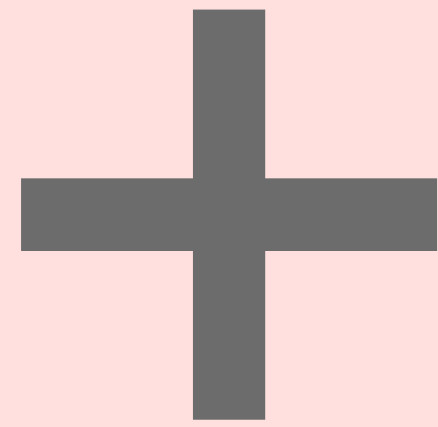

resumetemplate-gh-pages

HTML

Click it and it'll open
up in your browser

⌘ + ⌥ + i

command   option
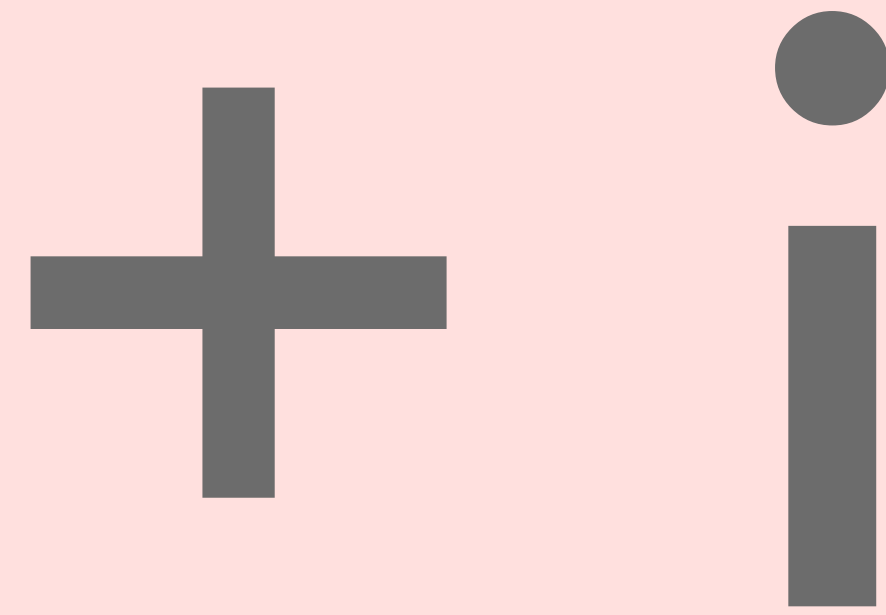

This will open the **developer tools** in your browser
- *which will be your best friend for the rest of your life as a developer*

* control + shift + i (on windows)

*NOTE: The changes you make dev tools are TEMPORARY!
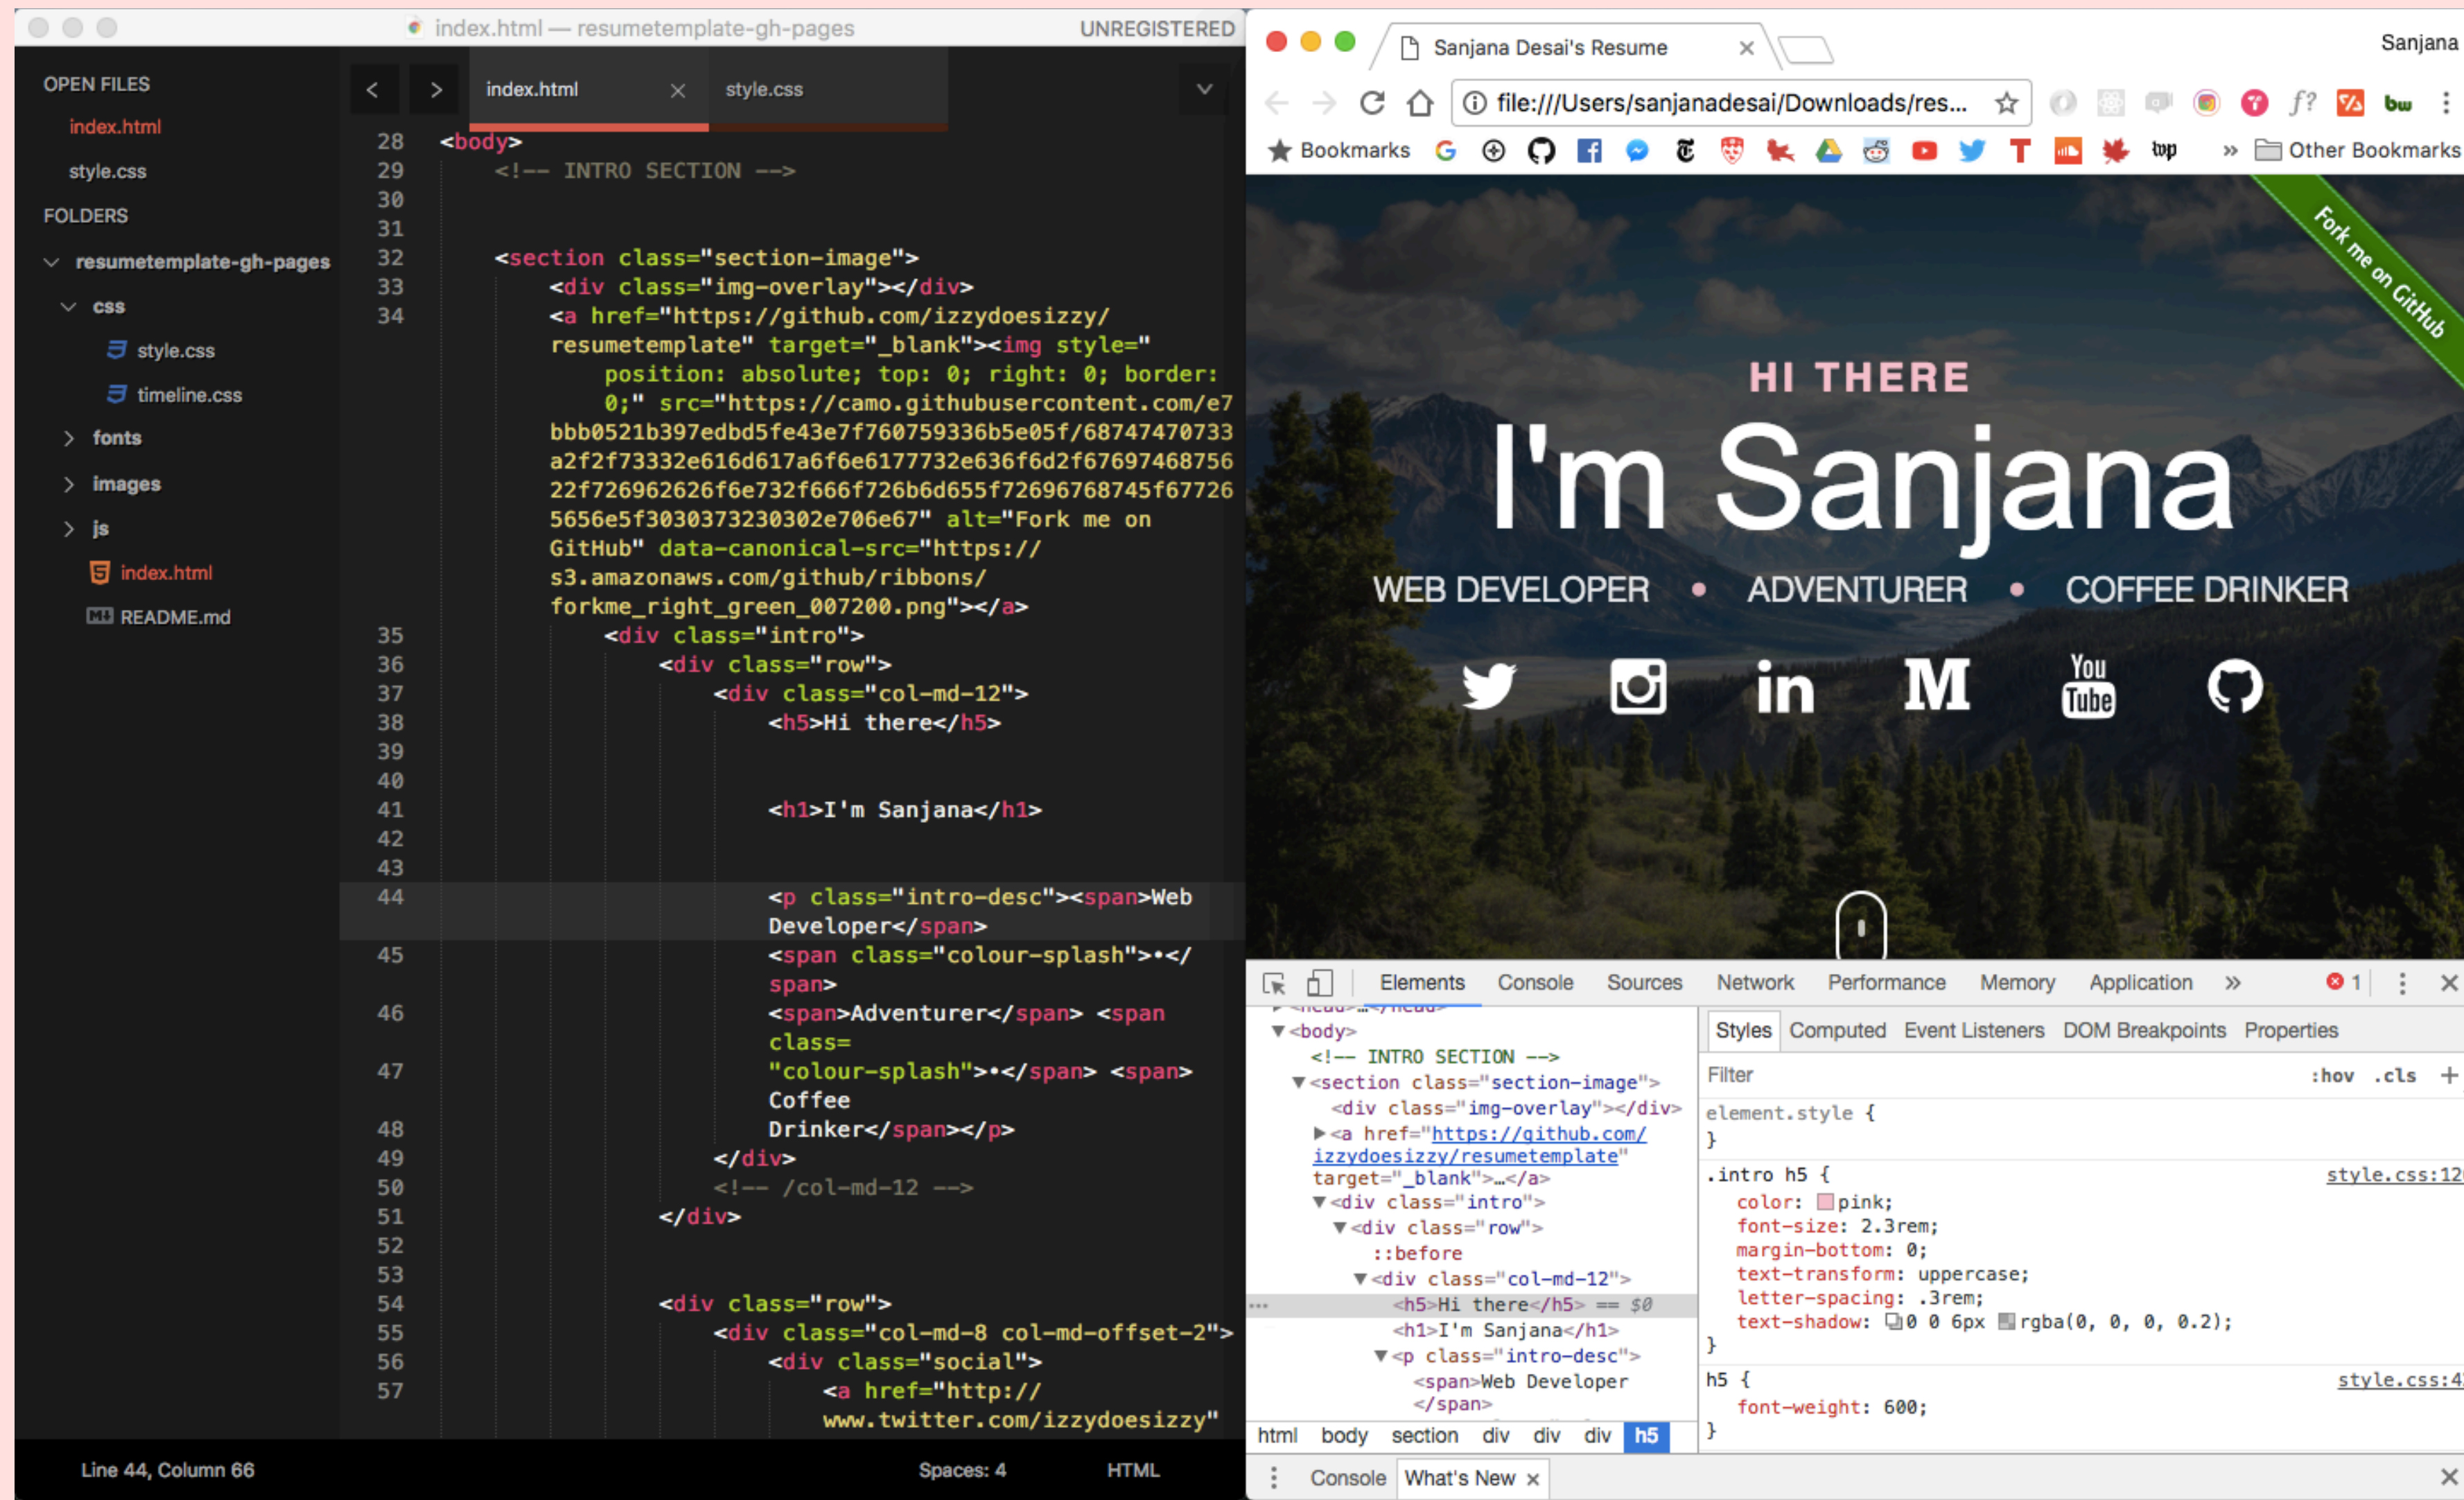

To make *real* changes, update the index.html file (and css files).
Once you save them and refresh that tab in your browser, you'll be able to see your changes.

HTML?

HyperText Markup Language
defines the *content* of your webpage

Some useful links:

Mozilla Development Network

HTML5 Cheat Sheet

```
<div>...</div>

<h1>Sanjana's Website</h1>

<img src=./images/pic01.jpg>
```

CSS?

Cascading Style Sheet

defines the *appearance* of your webpage

Some more useful links:

cssreference.io

Mozilla Development Network

```
h1 {
    font-weight: bold;
}

.section-primary span {
    color: #1abc9c;
    font-weight: bolder;
    opacity: 1;
}
```

Some more customization tools

Placeholder Images:

Profile Pic - lorempixel.com/150/150

Section Image - unsplash.com

Icons:

Font Awesome - fontawesome.io/icons

Want to host your resume?

Try this:

bitballoon.com

drag and drop your **entire folder**
